

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

BOTANICAL ACHIEVEMENT¹

TWENTY-FIVE years ago The Botanical Society of America imposed on me the task of preparing a presidential address. To-day I meet a similar obligation laid on me by the somewhat more democratized society which continues to bear that name.

For my subject then, I took botanical opportunity—moved, you may say, by the hopefulness of youth which looks forward and plans optimistically. To-day I wish to speak of botanical achievement—moved, you may say, by the observed tendency of age to live in the past. Possibly, later, you may not be sure that in choosing complementary subjects I have not wanted to extract much the same hopeful anticipatory lesson from both.

As one looks back over the past, he sometimes finds it difficult to pick out the significance of individual components of the conglomeration that forms the present superstructure of our science, and its foundations are buried in obscurity. Perhaps the most significant observation that he makes is that a person who is minded to add to it has each year to climb to a greater height before his own work can be commenced—unless he turn his attention to repairing the weaknesses and filling the crevices and pointing-up what has been done by others.

Work of this kind really makes the structure stronger, really keeps it from crumbling at some weak point under the weight that has been added above, and gives it an appearance of finish that must be secured at some time and by some one's labor before it can meet with final approval under critical inspection. Undertaking it may bring to light, even, wholly faulty workmanship or the incorporation of materials that have already begun to

¹ Address of retiring president of the Botanical Society of America, given at the Botanists' dinner, St. Louis, December 31, 1919.
